

# Scientific calculator

Hello there! If this is your first time using this calculator, then welcome!  
This is the user guide to the PyCalc Calculator, a free-to-use calculator that can perform basic maths and trigonometry!

The main menu features 4 options: Operations, Help, Recall, and Exit.

## **Operations:**

This is where you do all your calculations! You can use either the on-screen buttons, or keyboard buttons to make your inputs! For reference on keyboard shortcuts, refer to the Help menu.

## **Help:**

A menu that lists important information regarding the calculator, including keyboard shortcuts!

## **Recall:**

Ever tried to find the answer to your previous question? No matter, here you can view all your past calculations, and use one of the answers for your calculations in the Operations menu. You can also clear your calculation history here.

\*\*\**CURRENTLY IN DEVELOPMENT*\*\*\*

## **Exit:**

Exit the program. Thanks for using it!
